

Managing **your** IT infrastructure requires significant time and cost.

Imagine the time and cost savings to **your** business if **you** could...

...**reduce** the number of servers required to run your network.

...**move** important legacy applications to mainstream hardware.

...**walk** away from your network and get back to the tasks that help ensure your business is a success.

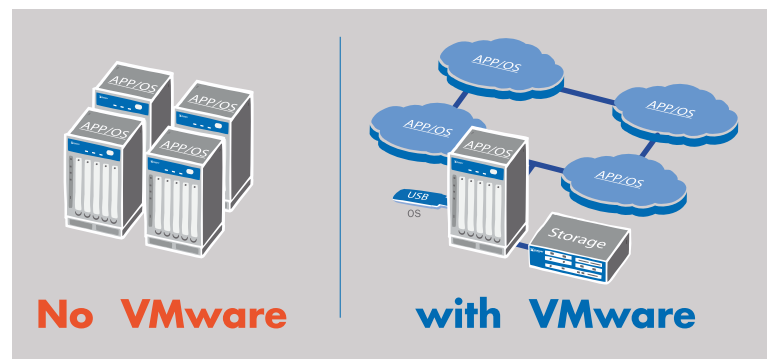

VMware allows you to operate multiple operating systems on the same machine, reducing up-front investment and long-term maintenance costs.

VMware can emulate dated hardware for compatibility with older applications, allowing you to discard expensive-to-maintain hardware.

Skore Systems specializes in **VMware** installation and maintenance. With our expertise, your seamless migration to **VMWare** will improve your bottom line from day one.

VMware = Efficiency

Traditionally, businesses have used separate physical servers for each function on their network. Most of the servers run at 5-15% capacity, effectively throwing away much of their investment in under-utilization. **VMware** has the potential to consolidate all of those servers onto **ONE** machine, maximizing utilization of initial hardware investments and lowering long-term maintenance costs.

Your introduction to **Skore Systems**

During our first meeting, **Skore Systems** will provide you with an overview of **VMware** and our support capabilities. We'll ask you some general questions about your IT environment and provide our first impression of the best **VMware** solution for your organization.

Going forward, a more detailed evaluation of your systems will be completed and an accurate time and billing report provided for reference.

VMware Installation	Additional services	Skore Systems specializes in:
Multi-OS capability	Consultation on Industry Best-practices for standardization, backup, and disaster recovery	VMware solutions for fast and flawless implementation
Lower up-front costs	Server, database, network, and wireless setup and security	Development of network road-maps for long-term planning/forecasting
Lower long-term maintenance costs	Citrix and MS Terminal Services	15+ years combined network management experience
Host legacy apps without legacy hardware	Remote Access	
Eliminate legacy hardware costs	Service level agreements	
Fast and easy application expansion/migration	Long-term maintenance and support
